ABSTRACT

This report describes the development, implementation, and evaluation of a minority-group training program on comprehensive education planning. Thirty educators, mostly black and female, responsible for comprehensive planning activities attended a 3-week workshop covering the areas of needs assessment, goal development, planning, project management, implementation evaluation, progress evaluation, and product evaluation. The areas of instruction were selected from results of a training-needs assessment and were implemented in the workshop via appropriate instructional modules (in the field-test stage) as developed by various education agencies. Results indicate that the instructional materials were appropriate for the audience as determined through product evaluations and trainee ratings. Followup evaluations indicate that most of the trainees felt very positive toward comprehensive planning, and over half of the trainees were involved in comprehensive planning activities. Most developers of modules used in the workshop indicated that evaluation data would help modify or clarify the nature of their instructional products. Additional products developed in coordination with the training program include a needs assessment instrument, implementation procedures, and a catalog of instructional products relating to educational research and development. INTRODUCTION

Originally funded to completely develop a training program for research and development personnel, the project was revised, with a change in directorship, to be both a needs-based training program and a disseminator of new educational products. The rationale was, in part, to assess the suitability of new, unpublished programs for the previously defined (original proposal) target population of predominantly Black and predominantly female representation. It was not at all clear, at that time, that other training programs in educational research and development were based on actual training needs of personnel in the field or that the field testing of R&D type training programs included adequate minority group representation. Thus, in consultation with NIE officials, it was agreed that the original proposal be revised to deliver needed skills while at the same time assessing whether the training programs were appropriate for the target population.

Specific goals of the program were to assess the training needs of minority groups in education, to match suitable training programs to these needs, to conduct appropriate training, and to evaluate results of the training. Product forms derived from the project include a needs assessment instrument and an accompanying schedule of procedures, results of the training program, and a catalog of existing training materials.

Evaluation of the training Institute indicated that the modules were generally appropriate for the Institute participants. A significant increase was noted in the participants' perceptions of their own abilities and in their performance on the instructional modules. Over half of the Institute participants were subsequently involved in comprehensive planning activities. Follow-up correspondence with the various Institute consultants indicated that revisions to instructional modules would be based on findings from the Institute.

PROCEDURES

Specification of Target Audience

As specified in the original proposal, the target population is not the highly trained and advanced graduate student but rather the "front-line" persons in public education who are responsible for the majority of instructional activities. These persons are typically employed in an administrative or instructional capacity within an educational system.

While the only prerequisite requirement was the possession of a bachelor's degree, the total number of trainees must contain at least 40% female membership and 60% racial minority membership. The educational requirement was set consistent with expectations of most training programs and realistically associated with the educational standards of most school systems. The ethnic and sex proportionality was set consonant with the desire to investigate the appropriateness of training materials for minority groups and was equally consonant with the student population of the sponsoring institution, Florida A&M University.

Further educational, professional, or demographic specifications defining the target audience were considered inappropriate since the purpose was to select trainees based on a homogeneous set of identified training needs rather than to offer preselected training programs to a rigidly specified group of trainees.

Procedural Model

The first step in designing instruction is generally conceded to be the specification of instructional objectives (e.g., Briggs, 1970; DeCecco, 1968). However, instructional design models of this type implicitly if not explicitly presuppose the nature of the instructional content. Moreover, it is often the case that curriculum development corporations have content matter at least roughly defined thereby specifying the type of initial phase required in systematic developmental sequences. For instance the valuable guideline entitled Calipers (Southwest Educational Development Laboratory, 1969), presents a learning

systems developmental process which begins at the field test site selection phase.

By the nature of this project, the recognizable first phase occurs in an earlier temporal relationship than in the examples presented above. One of the major goals was to disseminate (distribute knowledge, information, and/or technology) field-test-ready educational materials based on the training needs of an, at that time, unknown target Parenthetically it was naturally hoped that population. dissemination would result in diffusion, or adoption and utilization, of the information. (See Schalock, Thomas, Morse, and Smith, 1972, for a more complete definition of dissemination, diffusion, etc.) Because of the lack of any systematic procedures readily appropriate to this project, it was decided to develop a procedural model (see Appendix A) which could then be used both as a guide for this project and any subsequent projects of a similar nature. model was roughly outlined initially and then refined throughout the project's duration. Although not intended to be a thoroughly validated and tested model, it is a workable model and thus provided operational guidelines for this project.

Assessment of Training Needs

The means for assessing needed competencies of educators proceeded on several fronts. In line with related studies by the AERA Task Force on RDD&E (1971), by the Far West Laboratory (1972), and by Teaching Research (Schalock et al., 1972), it was decided to construct an instrument for assessment of needed competencies. A second major effort was directed at determining training needs that exist by virtue of legislative acts, requirements by local school districts, etc.

Required training needs. In consultation with supervisors in the State of Florida Department of Education, it became apparent that concepts such as Accountability, Educational Renewal, and Comprehensive Educational Planning were going to be implemented in Florida schools, thereby automatically requiring that educators be appropriately trained. This type of "mandated" training requirement was thus used as the contextual emphasis of the project and therefore determined the content of the assessment

instruments. Also, the decision to concentrate project efforts on these requirements determined, in advance, that the majority of project trainees would be located in the State of Florida.

Needs assessment instruments. In an attempt to build a comprehensive yet manageable assessment instrument over the area of educational RDD&E, the classification system developed by The Oregon Studies (Schalock et al., 1972) was selected to be the major guideline. However, as documented in an earlier progress report, attempts to build such an instrument were discouraged by personnel involved with The Oregon Studies and also by consultants to this project.

In deleting the originally planned method of assessing training needs, the next logical step was to send to administrative personnel, staff developmentalist, instructional coordinators, prospective trainees, educational agencies, and other interested parties, an announcement of the project and a request to identify general areas where instruction was needed (Appendix B). An analysis of the 80 questionnaires returned (out of 170 distributed) indicated that a high demand existed for those skills representative of the concept, Comprehensive Educational Planning. cally, most responses were associated with the categories: comprehensive planning, needs assessment, evaluation, management objectives, management techniques, product dissemination, instructional development, curriculum management, and the techniques of teaching. As defined, comprehensive educational planning specifically includes all categories except the last three but by no means completely excludes these three.

From the results of the needs analysis, the decision was to develop a training program specifically over the area of Comprehensive Educational Planning. A subsequent assessment instrument (Appendix C) was then constructed and again sent to the same general audience for a more precise classification of the training needs. This second instrument consisted of a matrix of skills (adapted from The Oregon Studies) and product/output categories (as specified in results of the first questionnaire and consistent with the Comprehensive Planning Model as described in the Florida Department of Education publication, Planning for Change, 1972).

From results of the first and second questionnaires (number of returns were significantly less for the second questionnaire), and the mandate for all schools to submit comprehensive educational plans in 1973, a tentative workshop was scheduled.

Program Selection

Initial plans were to include the presentation of a FAMU based training session with a number of regionally located sessions scheduled on an as required basis. Attempts to coordinate regional sessions were stymied by factors such as lack of qualified project support personnel, limited or nonexistant release time available to inservice teachers within any educational region, the lack of clearly defined training needs within an educational region, and the difficulty of locating minority group personnel (Blacks and females) responsible for anything other than teaching activities.

Training sessions. Given the difficulty in scheduling regional training sessions, the decision was made to conduct a major training session at Florida A&M during the 3week period, July 9-27, 1973. This emphasis and the intention to compare trainee performance across all instructional modules, while adhering to constraints addressed in the procedural model (e.g., scheduling factors, room and facilities availability, assessment of entry behaviors), resulted in scheduling a workshop for approximately 30 trainees, to cover the entire content of comprehensive planning (Institute on Comprehensive Education Planning). Moreover, from early indications, the implementation of comprehensive educational planning concepts in school systems was at too early a stage to guarantee an unlimited supply of trainees (especially from minority groups) for precise trainee-instructional module matching, giving additional validity to the range of instructional content selected.

Instructional modules. With the decision made regarding the nature of the training session, it was necessary to search for instructional modules appropriate to the major activities in Comprehensive Educational Planning, namely: needs assessment; stating objectives, proposing and selecting strategies; implementing and monitoring strategies; product evaluation; and managing (see Planning for Change,

1972). Moreover, according to project specifications, only those modules in the field-test (not ready for marketing) stage of development could be employed in the training session.

Instructional modules located and considered appropriate for training in various areas of educational research, development, diffusion, and evaluation activities are documented in this report (see Appendix H), thus satisfying one of the project requirements. Note that the modules are categorized according to major or area headings of Research, Development, Diffusion, Evaluation, Planning, and Statistics.

Instructional modules selected for the Institute are listed below (in their order of occurrence in the Institute).

- Topic: Planning and stating objectives
 Module: Indicators of Performance
 Developer: Research for Better Schools (RBS)
 Implementers: H. Denby and J. Dougherty, RBS
- 2. Topic: Needs assessment and goal development Module: Setting Goals for Local Schools Developer: Cincinnati School Board Implementer: Wm. Cox, FAMU
- 3. Topic: Management Module: Project Management Basic Principles Codevelopers: Research for Better Schools and Ohio State University (OSU) Implementers: D. Cook and P. Stoycheff, OSU
- 4. Topic: Strategy implementation Module: Implementation Evaluation Developer: Center for the Study of Evaluation, University of California at Los Angeles (UCLA) Implementer: A. Fink, UCLA
- 5. Topic: Strategy monitoring
 Module: Progress Evaluation
 Developer: Center for the Study of Evaluation, UCLA
 Implementer: A. Fink (UCLA)

6. Topic: Product evaluation
Module: Evaluating Instructional Programs
Developer: Eva Baker, University of California at Los

Angeles

7. An additional module implemented in the few remaining hours of the workshop as a favor to the product developer was:

Module: The Field Test Game

Implementer: A. Fink (UCLA)

Developer: Richard McCann, Los Angeles, California

Implementer: Wm. Cox, FAMU

Prior to actually presenting the instructional modules mentioned above, the training session began with registration activities, a brief two hour session on human relations by Dr. James Beck (FAMU), a 'an introduction to the concept of Comprehensive Educational Planning by John Wheeler, administrator for Comprehensive Planning in the Florida State Department of Education (see Appendix D).

Trainee selection. The terining program was designed for those people (of previous, defined characteristics) in the school districts and other educational systems who have the responsibility for implementing some phase of Comprehensive Educational Planning. During the project planning stage it was known that each county, or district (67), had two coordinators of comprehensive planning and that each school was supposed to appoint a comprehensive planning Furthermore, it seemed reasonable to expect that various supervisory personnel in the State Department of Education would also be involved and hence could benefit from the training session. A specific effort was also made to attract trainees from low-population, limited resource districts where there is an apparent shortage of R&D type personnel, activities, etc.

Selection of the 30 trainees was planned as a 2-phase process. The first phase consisted of categorizing and selecting on the basis of who was most likely to benefit from the training. Of the 70 applicants, 9 individuals were currently involved in comprehensive planning (Category 1), 11 individuals indicated that they were assigned but currently not involved in comprehensive planning (Category 2), 16 individuals expected to be involved but were not yet appointed

to comprehensive planning activities (Category 3), and the remaining individuals (Category 4) applied for the workshop for various other reasons to include the receipt of graduate credit or the basic desire to attend a summer institute. Thirty participants and six alternates were selected exclusively from the first three mentioned categories but, because of cancellations, all alternates and one individual from the fourth category were finally admitted to the Institute.

The second phase of the selection process, that of substituting members to meet the 60%-40% (Black-female) minority representation was not required. Actual representation was 87% Black (26 Blacks, 4 Whites) and 67% female (20 females, 10 males). The loss of one Black, male trainee, because of personal reasons, occurred during the workshop thereby prohibiting the selection of an alternate participant.

A categorization by professional roles of the remaining 29 participants reveals: one principal, two assistant principals, six staff assistants, one guidance counselor, one curriculum supervisor, one representative from the Florida State Department of Education, and seventeen teachers. It should also be noted that of the 30 individuals who started the Institute, 25 (83%) had previously taken classes from Florida A&M University.

RESULTS

Discussed in the results section are the evaluations conducted by project staff and by curriculum product developers (Institute consultants), the procedural model, and the catalog of instructional materials.

Project Administered Evaluations

Evaluation data were collected on participants preand post-Institute skills, on how participants reacted to each instructional module, on the participants final evaluation of the entire Institute, and on the subsequent impact (follow-up study) of participant attendance in the Institute. Instruments used to collect these data were all developed by the project staff.

Initial versus post skills inventory. During the first day of the Institute and approximately 4 months (November) later, each individual rated his own level of expertise (see Appendix E), on a five-point scale, over the 9 skill areas presented in the Institute (5 = maximum, 1 = minimum rating). The mean initial (I), final (F), and difference (D) scores for 28 participants are presented below.

TABLE 1

Initial, Final, and Difference Mean Skill Scores*

	Skill	Mea	Mean Scores		
		Ī	F	D	
1.	Needs Assessment	2.2	3.8	1.6	
2.	Deriving Goals	2.4	3.8	1.4	
3.	Planning	2.5	3.9	1.4	
4.	Project Management	2.2	3.6	1.4	
5.	Setting Objectives	2.5	3:9	1.4	
6.	Strategy Selection	2.2	3.8	1.6	
7.	Implementation Evaluation	2.1	3.8	1.7	
8.	Progress Evaluation	2.2	3.9	1.7	
9.	Product Evaluation	2.1	3.9	1.8	

^{*}The mean difference score in each area was

significantly different at the .05 level (t test on dependent measures) even while a few participants were not actively using these skills over the time period evaluated.

Individual product evaluations. Data for this section are derived from the evaluations (see Appendix F) which were conducted immediately upon completing each respective module. Participants responded on a five point scale (5 = maximum, 1 = minimum rating) to each of the following questions.

- 1. How significant do you judge the module to be in terms of helping you in C. E. P.?
- 2. Rate the instructional content in terms of understandability.
- 3. Rate the instructional content for its relatedness to your role in Comprehensive Educational Planning.
- 4. Overall, you feel that your input contributed to the group's growth.
- 5. The group you were in contributed to your own personal growth.

Mean scores for the five questions are presented below and are based on an N of 29. Responses to questions 4 and 5 were required only where group processes occurred (modules 1, 2, and 4).

TABLE 2
Product Evaluation Mean Scores

	Module			Item		
		<u>1</u>	<u>2</u>	3	4	<u>5</u>
1.	Indicators of Performance	4.41	4.34	4.38	3.97	4.24
2.	Needs Assessment	4.41	4.31	4.41	4.21	4.66
3.	Project Mgmt.	3.83	3.38	3.31		
4.	Imp. & Prog. Evaluation	4.17	4.07	4.00	3.62	3.72
5.	Evaluating Inst. Pgm.	4.03	3.69	3:90		
6.	Field Test Game	4.38	4.59	4.28		

For the first three items, analysis of variance indicated a significant difference between the module mean scores in each of the three items (F's = 2.67, 10.57, & 8.23, respectively; df = 5/168; p < .05). Application of

the Newman-Keuls sequential range test indicated that: in item 1, mean scores for modules 1, 2, and 6 were each significantly different from the mean score for module 3; in item 2, modules 1, 2, 4, & 6 differed significantly from module 3 and modules 1, 2, & 6 were significantly different from modules 5; and in item 3, all modules were significantly different ly different from module 3(p < .05). Subsequent analysis using the Newman-Keuls sequential range test indicated a significant difference (p < .05) between all mean scores within both items 4 and 5.

Final evaluation. On the last day of the Institute, participants completed a 12 item final evaluation. Since the items required write-in answers, categorization of the responses reflects this author's judgment as to response interpretation. Furthermore, since responding participants provided more than one comment to each item, the tabulation of total item responses may sum to more than 29 (number of participants) and should be kept in mind when reviewing the data presented below. Generally, only the more frequent responses (10% or over) are presented with each of the following items.

- Item 1: Was sequence of modules in proper order?
 Response -- Yes (69%)
 Response -- Needs Assessment (Cincinnati) should
 have preceded Indicators of Performance
 (RBS) (24%)
- Item 2: How well did Institute relate to your concept of Comprehensive Educational Planning (C. E. P.)?

 Response -- All elements were covered and increased my knowledge (79%)

 Response -- Needed more on Florida plan (10%)
- Item 3: Comment on operation of Institute
 Response -- Orderly, smooth operation (55%)
 Response -- Underestimated time requirement (18%)
- Item 4: Reactions toward daily monitoring and evaluation of Institute proceedings
 Response -- Necessary (54%)
 Response -- Unnecessary (4%)
 Response -- Effective (12%)

Item 5: Which module most relevant for you in terms of Comprehensive Educational Planning?
Response -- All (13%)
Response -- Indicators of Performance (RBS) (27%)
Response -- Implementation & Progress Evaluation (UCLA) (33%)
Response -- Evaluating Instructional Programs (UCLA) (7%)
Response -- Project management (Ohio-RBS) (10%)
Response -- Needs Assessment (Cincinnati) (10%) (All response categories are displayed)

Item 6: Which module was least relevant...?

Response -- Project Management (53%)

Response -- Indicators of Performance (26%)

Response -- Evaluating Instructional Programs (11%)

Response -- Product Evaluation (5%)

Response -- Human Relations Introduction (5%)

(All response categories are displayed)

Item 7: List two things learned of immediate importance to you in C. E. P.

Response -- Progress evaluation (9%)
Response -- Methods of C. E. P. (23%)
Response -- Project management (15%)
Response -- Needs assessment (13%)
Response -- Evaluation (13%)

- Item 8: What would you do differently in conducting a similar workshop?
 Response -- Nothing (11%)
 Response -- Increase time allowed (40%)
- Item 9: Similarly, what would you do the same?

 Response -- Everything (41%)

 Response -- Provide step by step instruction (10%)

 Response -- Provide variety of consultants (10%)

 Response -- Use same modules (10%)

- Item 11: How could I make workshop a better experience?

 Response -- Reduce material covered (14%)

 Response -- Nothing (21%)
- Item 12: Additional comments
 Response -- Enjoyed it (52%)
 Response -- Learned a lot (32%)

Follow-up evaluation. Conducted in November and early December, each of the 28 participants was visited at his/her home site and asked to discuss the impact of attending the Institute. (Two participants, one who moved to New York and one who did not complete the Institute, were not contacted.) Included in the discussion were the following questions. As in the previous section only those categories receiving at least 10% of all total responses are mentioned.

- What have you done in Comprehensive Educational Planning since the Institute?
 - Response -- Developed district plans (18%)
 - Response -- Developed school plans (39%)
 - Response -- Nothing (43%) (skills were used in other activities however in all but one case)
- 2. What skills did you use?
 - Response -- Needs assessment (19%)
 - Response -- Deriving goals (17%)
 - Response -- Planning (16%)
 - Response -- Setting objectives (11%)
 - Response -- Implementation evaluation (11%)
 - Response -- Progress evaluation (10%)
- 3. Which skill helped or was the most valuable to you?
 - Response -- All equally valuable (10%)
 - Response -- Needs assessment (24%)
 - Response -- Deriving goals (10%)
 - Response -- Project management (16%)
- 4. Which skill was the least valuable to you?
 - Response -- Planning (12%)
 - Response -- Project management (28%)
 - Response -- No least valuable skill (40%)
- 5. Any other opportunities made available to you as result of attending the Institute?

Response -- No (75%)
Response -- More responsibility (25%)

6. What products have you developed related to using Institute derived skills?

Response -- None (38%)

Response -- 1 year plan for school (34%)

Response -- Curriculum products (10%)

Response -- 5 year plan for school (10%)

7. Discounting the time factor in what area could you have benefitted from more instruction?

Response -- Planning (17%)

Response -- Evaluation (17%)

8. What is your attitude toward Comprehensive Educational Planning?

Response -- Very positive (82%)

9. Has your level of satisfaction (or frustration) increased or decreased by taking the workshop?

Response -- Satisfaction increased (43%)

Response -- Frustration increased (29%)

Response -- Frustration decreased (25%)

Note: For those respondents whose frustration increased, the major (over 50%) reason was that the individuals were not given an opportunity to participate in C. E. P. For these 8 respondents, 7 were Black, 1 was White.

Comprehensive planning involvement analysis. A closer examination of responses to question number 1 reveals that the original categorization (i.e., Category 1, 2, 3, or 4) of participants according to expected involvement in comprehensive planning was not an accurate reflection of actual involvement (see Table 3).

Re-examination of the results of the follow-up evaluation for only those 16 individuals (57%) involved in comprehensive planning (as indicated in Table 3) reveals the following information. (Again, only those responses of at least 10% frequency are typically displayed.)

TABLE 3

Number of Participants, by Category, Actually Involved in Comprehensive Planning

Question #1Responses	Pre-workshop		Category	
	1	2	3	4
Developed district plans (18%)	2	2	1	0
Developed school plans (39%)	2	4	5	0
Nothing (43%)	1	3	8	i

Question #2. What skills did you use?

Response -- Needs assessment (23%)

Response -- Goal derivation (23%)

Response -- Planning (17%)

Response -- Setting objectives (13%)

3. What skill helped or was the most valuable to you?

Response -- Needs assessment (25%)

Response -- Goal derivation (13%)

Response -- Setting objectives (13%)

Which skill was least valuable?

Response -- No least valuable (20%)

Response -- Project management (28%)

Response -- Product evaluation (12%)

Any other opportunities made available to you as result of attending the Institute? Response -- No (75%)

Response -- More responsibility (25%)

What products have you developed related to using Institute derived skills?

Response -- None (18%)

Response -- 1-year report (59%)

Response -- 5-year report (12%)

7. Discounting the time factor, in what area could you have benefitted from more instruction?

Response -- Evaluation (19%)

Response -- Implementation strategies (13%)

Response -- Statistics (13%)

- 8. What is your attitude toward Comprehensive Educational Planning? Response -- Positive (94%)
- 9. Has your level of satisfaction (or frustration) increased or decreased by taking the workshop?

 Response -- Satisfaction increased (50%)

 Response -- Frustration increased (19%)

 Response -- Frustration decreased (31%)

Note: For those 3 respondents (19%), there was no consistent explanation for an increase in frustration.

Consultant Administered Evaluations

Data in this section are related to trainee performances on each curriculum product, or instructional module, as assessed by instruments devised by the product developer. In all cases, the data were collected and tabulated by product developer representatives. Products are presented in their order of occurrence in the summer Institute.

Indicators of preformance (RBS). As described in the Evaluation Report (Marvin, 1973), objectives of the module enable the user to

- 1. "Make decisions with regard to the feasibility of introducing this approach in the district.
- 2. Outline the tasks of initiating the Comprehensive Planning system in the district.
- 3. Operate using the basic skills and concepts of comprehensive planning presented in this module:
 - a) Planning objectives
 - b) Priorities and preferences
 - c) Program structure
 - d) Performance indicators
- 4. Have an appreciation of the scope and potential impact of this module on a school district."

An analysis of responses to the Pre-Workshop Questionnaire indicated, among other things, that 92% of the participants thought their school districts were interested in providing an opportunity for staff members to contribute to district improvements. It was summarized from the questionnaire results that the majority of school districts represented appear to have a definite need for improving the learning environment through achievement of district goals.

Results of final exercises completed by each of three groups of ten participants were evaluated by RBS personnel with respect to three criteria: Completeness, Appropriateness of Focus, and Quality. On a four point scale of excellent, good, fair, and poor, median ratings are as follows:

TABLE 4

Ratings of Group Performance on Indicators of Performance Module *

•		Criteria	
Group	Completeness	Appropriateness of	Quality
		Focus	
1	Excellent	Excellent	Excellent
2	Good	Excellent	Good
. 3	Fair	Good	Fair

The conclusion from these ratings was that while one group performed at a level below acceptable standards, the group as a whole was "able to achieve the objectives of the module as represented by the exercises (p. 5)."

An analysis of the Post-Workshop Questionnaire indicated that the majority of participants were favorably impressed with the module and that the majority (92%) of participants felt they could create performance indicators and implement comprehensive planning in their district.

In a personal conversation (Feb. 12, 1974) with the RBS director of this module (Michael Marvin), it was learned that the organization was pleased with the results and would not make any changes based on participant performance. When asked to compare participant performance from this Institute to other sessions, Mr. Marvin was unable to do so since this

was the first time the module had been used in a workshop mode and thus no comparison data exist.

Needs assessment and goal development (Cincinnati). The primary indicator of appropriateness of this module was the Entrance and Exit Skills Inventory. Using a five point scale (e.g., l = m capability; 5 = completely capable) each participant (N = 28) responded to the following statements on both the entrance and exit inventory.

- "1. Describe a process for setting goals for a local school.
 - 2. Conduct a small group in the identification of school needs and problems.
 - 3. Assist a group in analyzing and clarifying problems it has identified.
 - 4. Explain the types of objective data to a school-community group.
 - 5. Show how to identify and validate problems with objective school data.
 - 6. Describe the steps involved in constructing and administering a survey of the school community.
- 7. Show how to identify and validate school problems with the results of a community survey.
- 8. Translate a problem statement to a goal statement.
- Describe a procedure for ranking a list of school goals in order of priority.
- 10. Lead a group in seeking consensus on goal priorities."

For each of the ten questions, a significant increase was detected (p < .05, t test on dependent measures) between responses on the entrance and responses on the exit skills inventory. In verbal communication with the project director (Dr. James Morgan), he indicated that the performance of participants in the FAMU sponsored Institute was similar to the point of being indistinguishable from results of other workshops using this module.

Project management basic principles (RBS-OSU). This instructional package is intended to develop skills in four phases of the project management process: planning, preparation, operations, and termination. (See Appendix G for specific instructional objectives.) Data available from the summative evaluation report (Ball, Rao, and Valdes, 1973)

relate to FAMU participant performance on the Case Simulation exercise of the planning phase. The exercises were evaluated and scored, using an instrument developed by RBS, by three project management experts from the Project Management Institute. The group mean score (N=27) was 8.5 on the pretest and 11.2 on the post test. This significant (p < .05, t test) increase of 2.7 points actually occurred for eleven (41%), or less than half of the twenty-seven participants. "This is not surprising since some of the participants indicated before training began that they really did not want to participate in the workshop but were doing so for various reasons . . . (Ball, et al., 1973, p. 17)."

For comparison purposes, the pre-test mean score for twelve graduate students at OSU was 45.7 and, on the post-test, 55.5. This increase is a reflection of an improvement of all twelve (100%) educators and is significant at the .0005 level.

The conclusion of the RBS report was that the instructional materials did "effect a positive change in project directors' and other similar educators' ability to perform the project management tasks of project planning, preparation, operations, and termination phases (p. 37)."

Implementation/progress evaluation (UCLA). For the 31 participants (29 + 2 visitors) who completed both portions of the evaluation modules, 28 increased their score. Mean score on the pretest for all participants was 7.03 and the mean post test score was 10.30, a significant (p < .005, t test) mean change of 3.27.

Responses to the general workshop questionnaire developed by UCLA indicated that 29 participants stated that they would use what they learned on their jobs and that all participants found the workshop to be as much or more than they expected.

Evaluating instructional programs (UCLA). No evaluation data available from product developer.

The field test game. Designed primarily as a management game to involve participants in how to use resources (money and time) to conduct a hypothetical field test of instructional programs; the module was implemented in the last

few remaining hours of the Institute as an optional exercise. Summary findings are based on results of the 15 participants who completed the module.

While the participants all agreed that this exercise was fun and enjoyable, especially compared to the more rigorous modules presented earlier in the Institute, few were able to achieve the desired goal of implementing at least 70% of the instructional plan and at least 70% of the testing plan. Responses to review questions indicated that only one respondent showed a clear insight into the underlying rules of the game, that 5 respondents were generally able to understand some of the rules, and that 7 respondents were generally able to understand one or two rules. Two respondents didn't provide enough data to evaluate their comprehension of the module.

As a result of these findings, the module developers are revising the directions and procedures appropriate to the problems on budgeting, and are clarifying the introductory and all intermediate directions throughout the module. The developers are also increasing the time allotted for participants to complete the module. (Information obtained through personal correspondence with project director on February 20, 1974).

Procedural Model

As mentioned earlier, the model (see Appendix A) was used to guide activities throughout the project's duration. It represents an initial step in conceptualizing the variables which ordinarily must be considered in developing a workshop based on assessed training needs.

Instructional Materials Catalog

Included as Appendix H is a catalog of instructional materials. The catalog is a description of each instructional module which was located in the search for appropriate modules for the Institute on Comprehensive Educational Planning. It should be noted that each page (front and back) of the catalog contains the available information on any one particular module.

Original intentions were to develop, in conjunction with the Far West Laboratory for Educational Research and Development, a complete information source for each module. However, several factors prevented the attainment of complete information on all modules. First, the initial effort expended by the Far West Laboratory was based on a short term, trial project and from all indications was not refunded to permit satisfactory cooperative arrangements with this project. Secondly, in the summer of 1973 approximately 70 partially completed module catalog sheets were sent to appropriate product developers with the request that they be completed and returned. Of the 70 forms sent out, only 14 were returned.

As a result of the above mentioned factors, catalog format sheets contain only that information which this project staff was able to compile from a variety of sources.

The instructional materials' descriptions within the catalog are categorized first by the Area headings of research, development, diffusion, evaluation, planning, and statistics (adopted from information categories as defined by the AERA Task Force, 1971). Within each of these Area headings the descriptions are catalogued by Content headings as typically described by the CEDaR Catalog of Selected Educational Research and Development Programs and Products (1972).

CONCLUSION

It can be said that, for the Institute participants as a group, improved performance existed on all instructional modules evaluated. This was true even in the case of the project management module where the intended audience and the actual audience differed more than for any other module. Where comparative data exist, audience performance was similar to other field test data except again in the case of the project management module. Even so, while the absolute scores on the project management module might be lower than desired, the overall gain score was significant indicating that all modules were appropriate for the audience in this project.

There was some disappointment associated with the professional background of the Institute audience. that over half of the participants (17) were teachers is not particularly disturbing by itself except when coupled with the fact that 43% of the participants had not been involved in comprehensive planning activities at the time of the follow-up study. Furthermore, those participants who were other than teachers were not representative of the administrative personnel who were directly responsible for comprehensive planning. While most (one exception) applicants who were chosen to attend the Institute indicated they would be involved in comprehensive planning activities the fact is that these applicants did not include the key personnel in comprehensive planning, nor were these applicants able to live up to their involvement expectations (frustration level increased for 29% of follow-up study participants primarily because of nonparticipation in comprehensive planning). While one can hypothesize as to the reasons for the audience-type discrepancy (e.g., 3-week Institute too long, reaction of target population to program: quality, 'Institute announcement procedures), there is no way for this project to clearly ascertain the cause or causes.

For the Institute itself, participants were well pleased with the program and its operation even though there was minor concern over the sequence of the first two modules and the quantity of material covered in the 3-week

session. However, in spite of the minor concerns, 82% of the participants indicated at the end of the Institute that they had a positive attitude toward Comprehensive Educational Planning.

In the follow-up evaluation, it was revealed that 57% of the participants were actually involved in comprehensive planning activities even though, for the remaining participants, the skills were generally being used in other areas. In a tabulation of responses for only those individuals involved in comprehensive planning activities, there was a major increase, as compared with all Institute participants, in the proportional number of participants who were developing products, an increase in the percentage of respondents with favorable attitudes, and fewer participants whose frustration level increased after leaving the Insti-These changes were all in the direction that one would expect of participants actively involved in comprehensive planning. Likewise, an increase was noted in the percentage of responses indicating that there was no least valuable skill learned.

Composition of responses from those active in comprehensive planning versus responses for all participants did not measurably change over questions addressed to specific In most cases the skills generally considered most valuable were those associated with the early stages of planning activities (e.g., needs assessment, goal develop-Likewise, the least valuable skills were typically associated with the later occurring planning activities (e.g., project management, evaluation). These findings suggest that any subsequent workshops in this area should be more closely addressed to the actual activities that are expected to occur in the immediate future rather than to all activities concerned with such a large effort. over, the lack of any noticeable difference in the two data tabulations (all participants versus involved participants) of the follow-up study suggest that the early planning activities have empirical applicability in areas other than Comprehensive Educational Planning.

Lastly, it should be emphasized that the instructional modules did produce a significant change in participants' perceptions of their expertise over the appropriate skills and in post-test performance as analyzed by each product

developer. Even while the target audience wasn't profesionnally composed as originally expected, the modules were appropriate for the actual audience as assessed by the product developer.

RECOMMENDATIONS

Recommendations as discussed here are intended primarily for subsequent attempts at similar activities.

- 1. The needs assessment process might be better conducted at the local level, and especially with supervisory personnel who are able to indicate what training needs exist.
- 2. Any needs assessment instrument developed should be short, easy to read, and easy to interpret.
- 3. Caution should be exercised in scheduling lengthy (e.g., 3-week) training sessions. It is just possible that participants will not need all the skills implemented or that the extensive time commitment will eliminate many prospective participants.
- 4. Examine carefully the practice of offering stipends and college credit for workshop attendance. This practice may actually attract the wrong audience. What may be more appropriate is to have remuneration, etc. based on productivity resulting from workshop attendance.
- 5. Instead of asking workshop applicants to supply a statement of how they will use workshop delivered skills, it may be more appropriate to ask this of applicant's supervisor.
- 6. In line with the above recommendation, there should be close contact with the participants supervisor when conducting impact or follow-up studies.
- 7. An interesting possibility for evaluating participant use of derived skills is to have workshop consultants (module developers) evaluate materials subsequently developed by Institute participants.
- 8. Caution is urged when attempting to plan workshops which overlap or infringe on the responsibilities of other agencies, particularly those non-university agencies.

- A feeling of competition could easily develop between similarly oriented but noncooperation agencies which could hamper the efforts of the total program.
- 9. Arrange, as extensively as possible, to have sufficient qualified help to meet the needs of individuals or groups of individuals who desire your services but cannot meet your requirements.
- 10. When requesting others to complete and return information forms offer something in return, e.g., copy of final product, as an incentive to comply with your request.

APPENDIX A. -- PROCEDURAL MODEL

I. What are training needs?

- A. Assessment
 - 1. Consult superintendents
 - 2. Consult training directors
 - 3. Consult local and regional education agencies
 - 4. Consult state department of education agencies
 - 5. Consult prospective trainees
 - Consult recipients of services provided by trainees

B. Mechanics

- 1. Open-ended versus structured or closed instrument?
- 2. Single administration or multiple assessments with accompanying successive instrument refinement?
- 3. As an independent agency or in cooperation with other interested agencies?

C. Miscellaneous

- 1. What level of training is required?
- 2. What skills to be emphasized?
- 3. How to identify trainees?
- 4. Are trainees to in turn serve as trainers?
- 5. Match trainees to instruction or vice versa?

II. Resource selection

- A. Trainees
 - 1. What degree of entering skills?
 - 2. What degree of exit skills?
 - 3. How to screen and select applicants?
 - a. need
 - b. desire
 - c. qualifications
 - d. mandated training requirements
 - e. recommendations from subordinates and/or superiors
 - 4. What constraints do they have?
 - a. time (daily, weekly, etc.)
 - b. money
 - c. implementation responsibilities
 - d. simultaneous activities competing with training sessions

e. special restrictions (reading level, handicaps, etc.)

B. Instruction

- 1. Matching programs to personnel
- Matching programs to entry-exit level, and expectation level
- 3. Training required as instructor
- 4. Consultants needed for instruction
- 5. Commitment to deliver stated skills
- 6. Validity of announced program(s)
- 7. How to sequence instruction
- 8. Individually prescribed or selected instruction versus fixed sequence instruction
- 9. Training administered in toto or over interval of time
- 10. Media support required (personnel & equipment)
- 11. Regional versus central training sites
- 12. Efficiency of pacing instruction
- 13. Evaluation of instructional process, audience participation, etc.
- 14. Evaluation of products (immediate & long-term impact)

C. Support Systems

- Training announcement strategy (s)
- 2. Classroom space
- 3. Housing & transportation requirements
- 4. Food and coffee/refreshment service
- 5. Personnel for management and monitoring functions
- 6. Independent personnel for evaluation functions

III. Operational constraints

A. Presession

- 1. Housing reservations
- Registration (local, university, etc.)
- Certification standards met and official endorsement received
- 4. Publication time lines (announcements, bulletins, meetings, newspapers, radio, TV, etc.)
- Catering (food, refreshments, etc.)
- 6. Installation of training as an approved new course offering (university, etc.)
- 7. Processing time lag on all procedures

B. Session

1. Scheduling of announcements, guest speakers, etc.

- 2. Scheduling of registration (personnel, auto, housing, etc.)
- 3. Timing (beginning, ending, breaks, etc.)
- 4. Support personnel scheduling
- 5. Audience awareness of evaluation procedures
- 6. Audience awareness of criteria by which they will be judged or evaluated, reimbursed, etc.
- 7. Audience requirements (behavior, follow-up commitment, attendance, etc.)

IV. Evaluation

- A. Instructional
 - 1. Cognitive
 - 2. Affective
 - 3. Psychomotor
 - 4. Standards of achievement and/or acquisition
 - 5. Process, product, and impact
- B. Procedural
 - 1. Implementation evaluation
 - 2. Personnel responsible for evaluation
 - 3. Announcement of results
 - 4. Ongoing and final evaluation-based program modification
 - 5. Coordination with trainee's supervisors and trainees subordinates
 - Time lag appropriate for assessing impact of training
 - 7. Measures or products appropriate for impact assessment
 - 8. Immediate notification of any breakdowns
 - 9. Alternative procedures for failure to meet any prespecified conditions

APPENDIX B. -- INITIAL INSTITUTE ANNOUNCEMENT

School of Education
Research and Development
Personnel Training Project
Florida A&M University
Tallahassee, Florida 32307
January 24, 1973

Dear

As director of a federally funded training project, my responsibility includes administering a training session this coming summer for education related personnel. I would like to enlist your aid in defining professional competency areas where either you and/or your personnel could benefit from a short (three weeks maximum) summer institute.

I am aware that the Florida Department of Education has embarked on joint policies of Educational Renewal and District Comprehensive Educational Planning. However, these labels in and of themselves are too broad and vague to define needed instructional programs. Therefore, on the second page please list specific professional needs that you or your staff currently have or anticipate having in the near future (1973). These needs should be related to activities such as research, development, diffusion, or evaluation which are amenable to instructional programs rather than teacher-specific skills such as teaching and assigning Appropriate activities and skills include planning and conducting educational or staff needs assessment, curriculum management, instructional development, problem solving, interpersonal influence, systematic planning, product dissemination, context/process/or outcome evaluation, and behavioral research.

While the training session is tentatively scheduled to take place in Tallahassee, Florida, please indicate if you would prefer an alternate location.

Sincerely,
William F. Cox, Jr., Ph.D.
Director, R&D Personnel
Training Project

WFC:rbm

Suggest as many education-related needs as you want and please don't be bashful or hesitant.
Is there an alternate location you would prefer?
Where?
What starting date would be most appropriate for you?
Names of others in your area who would probably attend this type of training session.

·
Please return this page at your earliest convenience.

Your cooperation and responses are appreciated.

February 16, 1973

Dear Respondent:

Florida A&M University will be conducting training sessions this summer both in Tallahassee and at regional locations for education related personnel. Training sessions will be related to competencies required for Comprehensive Educational Planning. However, to more precisely meet the training requirements of prospective trainees, training session content will be selected from results of the following questionnaire.

If you are interested in attending either a Tallahassee or regionally based training session please complete this questionnaire.

DIRECTIONS:

- a) For each of the product or output categories (listed down the side of the page) in which you have some responsibility (now or in future) place an R in column 1.
- b) Also, in column 1, place the number (1 low, 2 medium, 3 high) indicating level of training you wish to receive next to the appropriate categories.
- c) Then, for further clarification, place a desired training level number under the appropriate skills (top of the page) for each product category of interest. Note that all the skills do not necessarily apply to each and every product category.

APPENDIX D.--SCHEDULE

COMPREHENSIVE EDUCATIONAL PLANNING INSTITUTE, JULY 9-27, 1973 Sponsored by the School of Education, Florida A&M University, through a grant from the National Institute of Education, Washington, D.C.

WEEK 1

- July 9 8-12 Registration, Human Relations (James Beck); Introduction - "Florida's Approach to District Comprehensive Planning" (John Wheeler, DOE).
 - 1-5 -- Comprehensive Educational Planning (Developer - Mike Marvin - Research for Better Schools); (Implementer - Herb Denby, RBS).
- July 10 8-12 Comprehensive Educational Planning (Dethru 1-5 veloper - Mike Marvin - Research for Bet-July 12 ter Schools); (Implementer - Herb Denby, RBS).
- July 13 8-12 Needs Assessment & Goal Development

 1-5 (Developer James Morgan Cincinnati Public Schools); (Implementer Wm. Cox, FAMU).

WEEK 2

- July 16 8-12 Needs Assessment & Goal Development (De-1-5 veloper - James Morgan - Cincinnati Public Schools); (Implementer - Wm. Cox, FAMU).
- July 17 8-12 Project Management (Developer Desmond thru 1-5 Cook Research for Better Schools); (Implementer Cook & Stoycheff, Ohio State University).

WEEK 3

- July 23 8-12 Implementation & Progress Evaluation (Dethru 1-5 veloper Stephen Klein Center for Study of Evaluation); (Implementer Arlene Fink Center for Study of Evaluation).
 - July 26 8-12 Product Evaluation (Developer Eva Baker UCLA); (Implementer Wm. Cox, FAMU).
 - July 27 8-12 Evaluation & Debriefing.
 - 1-5 Picnic Wakulla Springs.

(The Institute will meet in Room 200A, Gore Education Complex [GEC]).

Tit	le of instructional module
QUE	STIONS FOR EACH INSTRUCTIONAL AREA
1.	Name
2.	What for you was the major activity in the past sequence of instruction?
3.	How significant do you judge it to be in terms of help- ing you in Comprehensive Educational Planning?
	highly very little significance
4.	Rate the instructional content in terms of understanda- bility.
	highly not very understandable understandable
5.	Rate the instructional content for its relatedness to your role in Comprehensive Educational Planning.
	highly not related related at all
6.	Overall, you feel that your input contributed to the group's growth.
	strongly strongly agree disagree
7.	The group you were in contributed to your own personal growth.
	strongly strongly agree disagree

APPENDIX G .-- PROJECT MANAGEMENT INSTRUCTIONAL OBJECTIVES

Objectives of Module 2

The Project Management Basic Principles instructional package is intended to develop the skills of acting or prospective school district project directors in the four phases of the project management process--planning, preparation, operations, and termination. The instructional objectives of the module are the twelve basic project management tasks that the user should be able to perform upon completion of the module. These objectives/tasks are classified according to four phases of the project management process in the list below.

A. Project Planning Phase

- 1. Specify the goal, missions, and tasks of a project and arrange them into a hierarchy.
- 2. Arrange the tasks of a project into a flow illustrating the sequence or order for completing the tasks including which tasks may be performed in parallel.
- 3. Make time estimates for the completion of a project and the performance of individual tasks within the project.
- 4. Estimate the resources needed for each project task and schedule the time and place for the use of those resources.
- 5. Develop both a typical line item budget for a project and a "program" type budget which specifies the cost of each project major activity.

B. Project Preparation Phase

1. Write a plan for hiring and orienting project personnel, arranging for delivery of project materials and supplies, and performing other tasks necessary for smooth project initiation on the specified date.

- Specify and design the necessary forms and procedures for the flow of information among project staff and between other school personnel and the community.
- 3. Develop guidelines which detail the general and specific work procedures to be followed by project staff.

C. Project Operations Phase

- Identify problems in the operations of a project by reviewing periodic reports of the work progress on project tasks.
- Specify and use various criteria in the selection of action designed to correct problems identified in the operation of a project.
- 3. Specify the course of action selected to correct a problem in the operation of a project.

D. Project Termination Phase

 Write a plan for releasing project personnel, disposing of surplus materials and supplies, storing important records and performing other tasks necessary for the smooth and orderly ending of a project.

The focus of the evaluation was upon determining whether or not the use of the module by the target population results in an increase in their ability to perform these project management tasks.

Title: Observing and Interviewing

Author: Enoch I. Sawin

Source: (Developer/Distrubutor)
The Far West Laboratory of
Educational Research and Development
1855 Folsom Street
San Francisco, California 94103

Prerequisite Competencies: College level skills in reading, writing and speaking

Instructional and Staffing Requirements:

instructor or manager

Target Audience: Entry - professional and paraprofessional level of RDD&E (two versions)

Audience Size Restrictions:

Minimum: 4
Maximum: about 20 per instructor Other:

Description: There are six learning episodes in the module. It enables the student to develop compentencies in observing and interviewing that will be useful in DD&E projects. These compentencies include knowledge of a variety of techniques of obsering and interviewing and understanding of basic principles pertaining to their use, as well as skill in their application.

Equipment Requirements:
(User Supplied)
paper, pencils, tape recorder

Estimated time to complete: 27 hours Components: 1 module

May we use or test module in present status at our location?

Title: The Retrieval of Information Using Special Sources

Author: Freeman F. Elzey

Source: (Publisher/Distributor?)
The Far West Laboratory for Educational
Research and Development
1855 Folsom Street
San Francisco, Cal. 94103
Prerequisite Competencies:

Instructional and Staffing Promit on 1 film, 2 film strips, 1 slide presentation, current copies of RIE and ClJE and the Thesaurus.

Target Audience:

Description: This module describes the type of sources and information relevant to the ERIC system. It is divided into six learning episodes and is self, contained. It contains an introduction, assignment of reading materials and/or audio visual presentations and various exercises for the student to perform.

Audience Size Restrictions:
Minimum:
Maximum:
Other:

Equipment Requirements: (User Supplied)

Estimated time to complete: 18 hrs.

Components: (Producer Supplied) 1 module, series of documents, pamphlets, instructional manuals, excerpts from publications and audio visual aids.

Performance/Behavioral Objectives: Note: Please specify nature of

Objectives, avariety of special information resources, 2) know the general structure and types of information stored in ERIC system, 3)know how ERIC reference tools are organized, b)know the purpose and function of the Thesaurus of ERIC descriptors, 5) know how to complete a search of the ERIC system, using various reference tools and the general function of the ERIC computerized retrieval system, DIALOG.
